DIARY 2015

18 February	Council meeting, London
21 March	Yorkshire Group, RHS Garden Harlow Carr
15 May	Closing date for Summer 2015 <i>Bulletin</i>
May tba	Yorkshire Group, Himalayan Garden, Grewelthorpe
17 June	Council meeting, London
30 June – 5 July	RHS Hampton Court Palace Flower Show
10–14 September	Annual Gathering, Leenane, Ireland
15 September	Closing date for Autumn 2015 <i>Bulletin</i>
26 September	Yorkshire Group, RHS Garden Harlow Carr
30 September	Closing date for photographs for annual CD
21 October	Council meeting, London
31 October	Closing date the <i>Heathers</i> 13 (2016 yearbook).

For contact details of the Society's Officers, Editors, Group Organizers, and Administrator, see inside back cover.

Forewords

It is almost a year now since we moved from The Bannut and, although we miss our garden very much, we are glad we made the move when we did. The borders of Erica carnea that we have planted to edge the front drive of our new home, are flourishing, and making us feel more at home. The new owner of The Bannut is a keen and knowledgeable gardener, and, as a bonus, is also a trained pastry chef – apparently he and his wife have always wanted to own a tea-room. So we are confidently expecting exceptionally good afternoon teas at The Bannut in the future! If you are ever in beautiful Herefordshire and would like to visit the garden, you should still be able to find out what is happening by going to www.bannut.co.uk, but, if you are in area please call on us as well. Although 'Rosemary House' sounds rather like a home for the bewildered, we are still reasonably compos mentis.

Please note that our email address is dandmeverett@gmail.com.

Daphne Everett

Chairman's piece

Having just returned from a break in France which included a couple of visits to garden centres (just for a change), it was noticeable the very

limited range of heather cultivars offered for sale, essentially just the popular range of *Erica* × *darleyensis* that we also have in the UK. The same plants are the only ones visible occasionally in gardens and window boxes or in roadside plantings.

Whilst it is evident that gardening is not of such avid interest in France, when compared to the UK, I continue to question in which direction the heather market here, at home, is going. The most popular flower colours are undoubtedly the vivid reds, purples and whites leaving the pastel colours in the proverbial shade. The market, as a rule, is led by the consumer and they will purchase the best of what is most conspicuous on the shelf on the day of their visit. This selection is in the hands of the garden-centre plant-buyers, and heathers have to compete against numerous other plants for shelf space in the "plantaria" display.

Fortunately in the UK we have a residual number of enthusiastic gardeners, including this Society's members, who may, hopefully, delay the decline of interest in cultivars on offer, and remain a nucleus of gardeners displaying the best of British heather gardens, and supporting the specialist nurseries that stock a broad range of cultivars.

David Edge

Society news & events

Annual Gatherings 10–14 September 2015: The Leenane Hotel, County Galway, Ireland

There has been a very positive response from members. Consequently, only a very few reserved rooms are still available. If you are still considering joining us, it would be wise to contact me as soon as possible at susiek@gofree.indigo.ie or by telephone (00353 95 43575).

The programme is almost complete and will include three interesting speakers plus visits to Kylemore Abbey, the Connemara National Park at Letterfrack and a private heather garden in Connemara; plus the opportunity to view heathers in their natural habitats. Should you require some exercise there will be an option for a fabulous walk along Killary Fjord; the easy option will follow the same route, but by boat.

The cost will be **UK£285** which **includes** all accommodation for four nights, meals, entrance fees, tips and speakers. It is quoted in UK pounds to facilitate the majority of delegates, who will make their payment to The Heather Society in the usual manner. Should you wish to pay in Euro, please contact me as above and I will be able to give you the necessary details. (Full payment must be made by **31 July** and should be sent to The Administrator.)

If you require help with your travel arrangements, please contact me. It is hoped that a bus will be available from Ireland West International Airport (Knock) to The Leenane Hotel.

Connemara is a magical place to visit with its myriad lakes and spectacular mountains, and the sea close by. The wild flora boasts at least seven species of heather, most of which will be in flower during our Gathering. It may seem a long way to travel, but, hopefully, you will not be disappointed and will go home relaxed and rejuvenated after spending a few days in beautiful Connemara.

Susie Kay

Society's business Phil Joyner Hon. Secretary

Council membership

The Council of the Heather Society is pleased to welcome John Hall as a co-opted member. Under rule 6d John will retire at the next AGM and then be eligible for election to Council. John Hall is the proprietor of John Hall Plants and has been very much an active member of the Society, involved with the Society's appearances at the RHS Hampton Court Flower Shows and events at the RHS Garden, Wisley. John is the author of an article on winter heathers in the February 2015 edition of *The Garden* (see p. 11).

Council Members very much look forward to John's input in the management of the Society.

An action from the 2014 AGM

An action on the part of the Heather Society Council, requested at the 2014 AGM, was that members should have sight of the signed-off 2013 account sheets and Independent Examiner's report. Council agreed to include those documents with the 2015 Spring *Bulletin* mailing. To that end please find the relevant documents printed on the address sheet for this *Bulletin*. The Annual Report for 2013 was issued with the notice for the 2014 AGM.

A request to help at the 2015

RHS Hampton Court Flower Show

The Heather Society has put on a display, with a sales stand, for the last two years at the RHS Hampton Court Flower Show, within the Floral Marquee. The display has been designed and erected by the Society's Chairman, David Edge, and his nursery staff, and run with the support of David, his staff and a handful of members, mainly Council members.

The Society is to put up a stand at the 2015 Hampton Court Flower Show during the period 30 June to 5 July. In order to run the stand and give a break to those members manning it a minimum of three persons are required, two to man the stand at any one time and one person to go off and have a break. The Society is allocated

free entry tickets on each of the six days, so this is an opportunity for free entry to the Show and an opportunity for a look-around the site during the breaks. This may be especially appealing to those members within easy travelling distance of Hampton Court. Therefore I request interested members who are willing to put their names forward to contact me, so that a rota can be created to cover the six days. The manning of the stand involves selling heather plants and chatting to members of the public about growing heathers. Don't be put off if you think your knowledge is limited, as you have your own experiences to impart. The opening times, to the public, are 10am to 7.30pm (4.30pm on Sunday) although those persons manning the stand can enter the site earlier.

Please contact me if you are interested in helping using my contact details printed elsewhere in this *Bulletin*. Please indicate which day(s) you would be able to attend.

Gesellschaft der Heidefreunde

The German heather society does not exist any more; **Gesellschaft der Heidefreunde e.V.** closed down on 31 December 2014. Founded in 1976 by about 30 heather enthusiasts, the "Friends of heather" (Heidefreunde) quickly became more numerous and

the society (Gesellschaft der Heidefreunde e.V.) was registered in 1981. At the end of the twentieth century, the "Friends of heather" were quite active (see *Heathers* 10). Many members grew heathers for sale and it was then easy to buy heather plants for the garden. At its peak, Gesellschaft der Heidefreunde had over 300 members, but we all become older and, unfortunately, the younger people are not so interested in heathers and are even less interested in growing them. So, it became somewhat difficult to find sources for special sorts of heather, and fewer and fewer members showed up at meetings. Eventually, *Der Heidegarten* formed the only connection between the remaining Friends but it was difficult to get articles to sustain the publication. Therefore, when new elections for the board were necessary, no member was willing to take over this job. That was the point when we all decided to close down Gesellschaft der Heidefreunde, but we all hope that we will meet again as friends of heather.

Renate Harringer

Website news

The new Heather Society website goes live in February. The look and feel is very different from the old website, but most of the information has been retained.

The main difference is a new section for **MEMBERS ONLY** from which you will be able to log in, pay subscriptions using credit or debit cards via PayPal. In addition, you will be able to view and download back issues of the *Bulletins*, access the **cuttings exchange** programme and browse Society records. As time permits, this area will be extended to add value to your membership.

Login to the new area requires your **email ID**, as registered by the Administrator. You will also need a password (sorry, yet another, but it is necessary). There will be an item published in the **News** section of the website to describe how you set your password.

The cultivar lists in the **Heathers** section will be populated with images of heathers, as they become available. Good quality images are always sought by our Administrator, Dr Charles Nelson for the website, annual DVD, etc.

The **Growing and Aftercare FAQ** area in the **Heathers** section now includes good **Beginners Guide to Growing Heathers** courtesy of Daphne Everett.

The **Gardens** area in the **Heathers** section has some ideas where you can see heathers growing and have an interesting day pursuing your passion.

The new website is now compatible with tablet and touch screen devices and links to our Facebook page.

Hope you like the changes.

Dave Brown

Tippitiwitchet Log Charles Nelson

New members

We welcome the following members who have joined since **October 2014**

Mrs Jan **Ashby**, Farnham, Surrey

Mrs Renate **Harringer**, Hamburg, Germany

Ståle **Sørensen**, Furnes, Norway

Mr Stewart **Hall**, Surbiton, Surrey

Mrs Margaret **Welch**, Whistley Down, Devon

2015 yearbook, *Heathers* 12

The 2015 yearbook is to be mailed out by the Society's printer about the end of March. This new arrangement is yet another means of trying to reduce the Society's costs. It will only be sent to those members who have paid their subscriptions.

There is the usual mix of interesting articles, including Daphne Everett's history of The Bannut, Ted Oliver on last year's field trip in Galicia, James Mackay on his third Aberdeenshire heather garden, Richard Canovan on chalk heath, Mike Pirie on tree heathers and heather trees (see p. 12) ... and more.

2015 subscriptions

Thank you to all those who have renewed their subscriptions. At the time of writing, late January, only two-thirds of the subscriptions have been

renewed. If you are one of the members from whom no subscription has been received there will be a reminder in this *Bulletin*. In case your bank has informed you that a UK standing order payment has been rejected, please check that your standing order is correctly set up, for **Lloyds**. Our former Bank of Scotland account has been closed.

... and finally, from *Heather clippings*

In recent years we have seen the world of heathers radically changed. It is not that there are no heathers in garden centres or nurseries or even supermarkets – they are there by the million, often without any labels. Bud-flowering *Calluna* dominate, and those sold in the UK usually are imported from Germany or the Netherlands. Almost all are treated as disposable "annuals", to be thrown away when their "life" has ended. We need not discuss why they died! Quite a few are dead even before they are sold. The saddest sights are the "reduced to clear!" trays of half-price, long-departed lings.

The origins of this dramatic alteration lie in the Catholic tradition of decorating family graves at All Saints-tide as shown in Sandy Slonim's photograph taken near Salzburg, Austria (thanks to Sandy for providing the picture; there are more of her photographs in *Heather clippings* January 2015).

Group News

All members are welcome to attend any of the local group events

Home Counties Group

On Saturday 25 October members gathered outside the café in front of the entrance to Wisley Garden. I arrived at around 10.45 with a new THS member, Rachel Chilton, who I had agreed to meet near Wandsworth Town Station to give her a lift by car to Wisley. Lesley Whayman at the RHS had kindly advertised the event in *The Garden* so we were hoping some non-members might join us. John Hall had kindly arranged to sell heather plants on the day and as a special incentive any new members joining then would receive a special six-pack of heathers free.

We walked up to the National Collection at Howard's Field and were greeted by Andy Collins and Stewart Hall. Much to our pleasure we were joined by three non-members who had seen the advertisement in *The Garden*.

Meanwhile John was setting up his stall at the Hillside Event Centre.

Andy and Stewart described the National Collection, whilst our guests and new member Rachel had many questions to ask about the growing of heathers; soil suitability, when to plant, when to take cuttings, whether to prune? We were pleased to see Pamela Lee, our Vice-President, had been able to join us on the day. She

later informed me that her daughter had recognized one of the THS members in the photograph as one of her teachers. A lovely story!

The weather was gloriously sunny and warm for late October and because of the mild October weather we were blessed with seeing both the late summer heathers (*Calluna* and *Erica cinerea*, *E. vagans* and *E. manipuliflora* in flower, albeit fading, with newly opened flowers on *E. carnea*, *E. × darleyensis* and *E. × oldenburgensis*. After a group photograph we made our way to the restaurant for lunch.

After lunch we convened at the Hillside Event Centre for a talk by Merci Morris of Plant Heritage. THS members and guests were busy buying heather plants from John Hall's impressive display. Merci talked about the recent scheme that Plant Heritage had set up in order to help conserve collections of plants, called Plant Guardians.

Across Britain and Ireland there are dedicated gardeners who are charged with being holders of collections of a particular plant group, usually a single genus. These National Collection holders are responsible for the upkeep, record-keeping, propagation and often distribution of all the plants in their collection. The National Heather Collection at Wisley Garden represents the foremost collection of heathers in the United Kingdom. However, Merci suggested that under new criteria it is

possible to have collections that contain cultivars of just one species, or even a small specialized collection such as African *Erica* (Cape heaths).

Having a large collection to maintain can be onerous and time-consuming and so Plant Heritage has developed the Plant Guardians scheme whereby individual gardeners can take responsibility for a single cultivar (or a few). They will need to register with Plant Heritage and agree to have at least three plants of the cultivar(s) of which they are guardian. They will also allow members to take cuttings of the plant. This scheme seems to be an ideal way in which THS members can obtain those elusive species and cultivars. How often have you logged on to Plantfinder only to find the heather you are looking for is not available? So I would encourage as many members as possible to take responsibility for a species or cultivar that you have, that is not widely available, and to share it with others.

For more details please consult the Plant Heritage website: <http://www.nccpg.co/Plant-Guardians.aspx>

Afterwards I showed a few photographs of the field trip to Spain organized by Dr Jaime Fagundez, showing the various habitats which we visited, coastline, marsh, mountain and boggy plateau. We saw nine species of *Erica* as well as *Calluna* and *Daboecia cantabrica*.

Barry Sellers

Yorkshire Group

The RHS will now allow us two free meetings a year, rather than three, I have booked the Wolfson Room at RHS Harlow Carr for Saturday 21 March 2015 and the Jubilee Room for Saturday 26 September 2015. The meetings will start at 2.30 pm as usual. These dates are a little later than usual, the first in the hope of avoiding the snow, which regularly falls on the afternoon of our first meeting of the year, and the autumn one, to allow members to have a holiday in Ireland following the annual gathering of the Society. That is, if they are not involved with their local show.

No programme is planned as yet for these two meetings but we are more than happy to receive suggestions. We are a very small group of mature members so we can neither justify nor afford to pay a speaker.

At our third meeting in May we plan to visit the Himalayan Garden at The Hutts, Grewelthorpe near Ripon, North Yorkshire. Hutts is a Norse word meaning the head of the valley and as its name suggests the garden is full of ericaceous plants but not necessarily heathers. The garden is open from 25 April until 13 June; meanwhile I feel sure they will not mind this garden being advertised:

Opened in 2005, The Himalayan Garden and Sculpture Park is a 20-acre woodland garden in a spectacular setting approximately 6 miles from Masham and Ripon. A rich

tapestry of spring colour, the garden is teeming with a fabulous array of plants cloaking the steep hillsides from the valley floor up to the house which sits at 850ft above sea level.

Streams meander through the gardens valleys leading down to peaceful lakes. The recently installed pagoda, built in Bali, sits beautifully at the edge of Magnolia Lake adding the final touch to the beautiful reflections.

The garden is home to an extensive collection of rare Rhododendrons and Himalayan plants, nestled among mass plantings of showy hybrids.

Lovely swathes of spring bulbs drift through the garden providing early colour.

Charming native bluebells and ground-covering perennials complete the picture later in the season creating a characterful understory and knitting the whole garden together.

There may be a fourth meeting or visit but this will be decided in March or May according to members views. Whatever decision is taken I will ask the administrator to advertise the event on the website.

Jean Preston

North East Group

Even though we have had some pretty wintry weather, with gales, frost and sleet, our winter heathers have braved it all and are beginning to show colour. So we are hoping for a really good show. There are few plants that can stand up to these conditions and come up smiling.

With no other news, it just remains for me to wish all our fellow members a Happy New Year and a good summer.

Dorothy Warner

Philomath frolickings Ella May Wulff

My parents were teachers, as was my godmother, my mother's sister and her favourite cousin. Naturally, I was expected to become a teacher. Just as naturally, I was determined not to be a teacher. But teaching must be in my genes, because when I learn about something, I want to share that knowledge with others.

If "a picture is worth a thousand words", then a good way to teach is to show pictures that illustrate the points to be made. Although the gardens I create are about beauty and utility, when possible, I plant lessons, too.

Thus when I learned that Canadian heather-breeder David Wilson had successfully crossed *Erica erigena* 'Irish Dusk' with *E. carnea* 'Treasure Trove' to create a previously unavailable colour of *E. × darleyensis* – a clear pink without a hint of blue, I decided that it would be fun to plant 'Irish Treasure', his first introduction from that cross, near its parents in my garden. Then people could see at a glance how parental traits combine in their offspring.

Erica erigena 'Irish Dusk' is a compact cultivar of the species, easily recognizable even when not in flower by its distinctive, very dark grey-green foliage. It is also one of the earliest to show colour (THS Colour Chart H15), sometimes in late fall but most years at least by early winter. The fully developed flower colour (by late winter) is a strong clear pink (H7). With the exception of the similarly coloured 'Irish Salmon', this contrasts (some would say clashes) markedly with the flower colour of other pink *erigenas*, which are blue pinks. Consequently, 'Irish Dusk' is best planted with summer-flowering heathers separating it from the bluish-pink winter/spring bloomers.

If one wished to create a *darleyensis* without blue in its pink, *E. carnea* 'Treasure Trove' would be the logical choice to mate with 'Irish Dusk'. The flowers of 'Treasure Trove' also have no blue hues, though they are a much lighter salmon than those of 'Irish Dusk'. Like 'Irish Dusk', it is one of the more compact forms of its species, being slow to increase, at least in my garden. I wish it had a little more vigour, but its unusual colour makes it worth keeping.

Erica × darleyensis 'Irish Treasure' is, like its name, a melding of 'Irish Dusk' and 'Treasure Trove'. It is very compact for a *darleyensis* – in fact, David Wilson and David Small selected it for introduction precisely because of its compact growth habit – though it is

still considerably taller than *E. carnea*. Its flowers are intermediate in intensity between the pale salmon of 'Treasure Trove' and the deep hues of 'Irish Dusk'. Best of all, in my garden these flowers may begin to open as early as October, though they don't develop their deepest colour until March.

A few years after introducing 'Irish Treasure', David Wilson introduced its sibling 'Winter Treasure', which grows taller than 'Irish Treasure' and has a stronger colour. There is one other clear pink cultivar of *E. × darleyensis* available, David Edge's introduction 'Phoebe', a garden seedling that he believes has the same parentage as David Wilson's introductions and which has very dark grey-green foliage like that of 'Irish Dusk'. Gardeners looking for something a little different in the colour department would do well to seek out one of these cultivars. Better yet, plant all three together and let us know which performs best in *your* garden.

RHS Affiliated Societies events

RHS Wisley: 6 November 2014:

Plant breeding

On 6 November I attended a new event organized by the RHS. Held in the Hillside Event Centre it brought together a number of speakers talking about their experiences of plant breeding.

It was interesting to hear about the work of nurserymen in their quest to breed different types of flowers. Also the role of plant breeder's rights was discussed. There are a few heathers that are protected in this way.

Barry Sellers

RHS Wisley 27 November 2014:

Annual gathering

Barry Sellers and I attended the Workshop at the Hillside Centre, Wisley. Jim Marshall, introducing it, drew attention to the RHS posters for many of the societies (but not for The Heather Society yet). Then, after sessions by the new Director of Horticulture and an update by Sarah Cook on the Plants for the Future Workshop, held on 6 November, four societies gave an overview of what they do, their aims, objectives and challenges, not least membership. After lunch and networking there was a Science Update by John David.

Among RHS investments for 2015 and beyond are Harlow Carr and Wisley, where a master-plan for a new hub is proposed, which will involve relocation of the glasshouses to provide a new building for science libraries, education and exhibitions. Some changes have been made to the procedures for the awarding and rescinding of AGMs. Plant committees can arrange their own regular reviews (in addition to the ten-year review), appoint a forum of experts or, where urgent changes are needed due to

discovery of a disease, legislation on invasive plants, where an outstanding cultivar emerges, etc. round the table. To appear in the *Plant Finder*, published in April, awards will have to be ratified in October. In 2014 there were 36 trials (including offsite) and in 2015 there are 30.

The EU Plant Reproductive Material proposal was rejected by MEPs and it is being redrafted. Final lists of invasive non-native species are still being generated for legislation. The Nogoya Protocol on access and benefit sharing has been adopted: this was aimed at pharmaceutical companies but affects horticulture.

The Plants for the Future Workshop will be on 19–22 June. The November workshop, which was successful and well attended, established longer term objectives. These were to showcase work of British breeders and to increase networking between breeders and the trade.

The presentations by the Hardy Plant, British Clematis and British Fuchsia societies, and the RHS Fruit Group were much welcomed and full of interest. All have websites. The Clematis Society and British Fuchsia Society both use PayPal on their websites as we are planning. The latter has set up a Twitter account and a survey of their age groups revealed the importance of being on the web for the young while providing for older members who are living longer. The Hardy Plant Society is also on Twitter

Media Watch

Don't miss the February issue of *The Garden* (RHS), which has a superb 6-page article entitled "Winning Ways with Winter Heathers", written by Heather Society member John Hall, of John Hall Plants.

In his article, John covers all aspects of growing and maintaining winter heathers. He points out, among other things, their ease of maintenance, their tolerance of soil types and conditions, and the wonderful job the flowers do in providing a much needed food source for pollinating insects, at a time when food is short.

In the beautiful photographs illustrating the article, John clearly demonstrates the many ways that winter heathers can be used – from winter-flowering tubs and window boxes, to companion planting with spring bulbs and shrubs, as colourful weed-smothering ground cover, or a very effective roof garden, and, for the most ambitious, a green wall. Twenty different *Erica carnea* and *E. × darleyensis* are fully described and clearly illustrated.

John finishes his article by reminding his readers just what superb value heathers are. He makes the very valid point that a two-year old plant will generally cost less than a cup of coffee and will live healthily for more than 50 years.

and Facebook, but has membership of over 7,000 and subscriptions lower than ours. They have a 2,000 page website with 43 local groups and monthly meetings! But all four face falling memberships. Saving postage by emailing newsletters came up in the presentations and subsequent discussion but there was a need to produce hard copy for some members without email access and for public meetings. Direct debits also came up: they retain members but are expensive – Easy Collect cost the Rhododendron Society £600 but members did not reply while 30% of those who did sign up still pay standing orders! At future workshops other societies will have the opportunity to speak if they wish.

The Science Update presented by Dr John David set out the RHS's strategy for 2014–2019. This involves the development of a global knowledge bank on gardening and garden plants, plant health in gardens, gardening in a changing world and plant science for all – plants, people and the planet. Everybody found this useful with important messages about taxonomy and mis-naming – the latter is vital to avoid legislation on invasive plants controlling the wrong plant.

In discussion there was support for more time being devoted to plant societies and questions, answers and discussion. The uses different societies made of social media was welcomed.

Richard Canovan

In fact, the February edition of the *Garden* is a cornucopia of heathery mentions: In an article on winter plant combinations at Bressingham Gardens, by Adrian Bloom, there is reference to heathers in a photograph entitled "Add vibrant heathers", with a picture of *Pinus mugo* 'Winter Gold', interwoven with *Erica carnea* 'Pink Spangles' and 'Myretoun Ruby'. The "Jobs to do in February" page instructs readers to plant early flowering heathers, as they are bee magnets and will grow in any soil. There is also a third of a page given over to *Erica* propagation and a short news item on an RHS trial of the 100 best heathers (I hope to have further information about this in the Summer *Bulletin*).

Daphne Everett

Heather samples required

This is an illustrated begging note: we are involved in a research project using DNA sequence data to investigate the origins of the spectacular diversity of *Erica* (see recent issues of *Heathers*).

Heather Society members have already contributed a good number of samples of European species for our

analyses. We are extremely grateful, but, of course, we want more. We have

put together a map to illustrate a number of gaps in our sampling – interesting (but occasionally more or less inaccessible) areas where we know that particular species occur, but from which we have not been able to obtain material. With these areas particularly – but not exclusively – in mind, we would like to put out a request on behalf of our research team: to anyone planning his or her holidays in heather country in the forthcoming flowering season, we would be very interested to hear from you.
