

THE HEATHER SOCIETY

acting as

INTERNATIONAL CULTIVAR REGISTRATION AUTHORITY

certifies that

***Erica cinerea* ‘Yule Fire’**

has been registered by

KENNETH HUTCHINS
Mossyrock, Washington, USA.

REGISTRAR _____ DATE _____
on behalf of The Heather Society

Its characteristics at the time of registration were

Flowers: single, corolla and calyx amethyst (H1); June–October.

Foliage: shoots with bicoloured golden ends with brilliant glossy red inner leaves, colours deepen to orange and red in winter cold.

Habit: compact, spreading, 20 × 40cm.

“Distinctive bicolored foliage gives winter foliage color in areas that can not grow *Calluna*. The red is much more brilliant than other gold *E. cinerea*.”

Origins: sport on *E. cinerea* ‘Atropurpurea’, found by Ken Hutchins at Oregon Rhododendrons, Corvallis, Oregon, in 1994.

Named by Ken Hutchins: “Yule for the winter/Christmas color display, Fire for the flame-like mixture of red and orange foliage.”

Cultivar registration number: E.2008:01
