has been registered by

ANTHONY HITCHCOCK

Nursery, Plant Collections & Threatened Species Program Manager
Kirstenbosch National Botanic Garden

REGISTRAR _____ DATE _____
on behalf of The Heather Society

The characteristics of this Cape heath at the time of registration were

Medium-sized, erect clone, to an average height of 1.0–1.2m, to 0.5m broad.
Flowers light pink, tubular, 20mm, 3mm diameter; arranged in terminal 4-flowered,
or occasionally 3-flowered, umbels, on very short lateral branches.
Synflorescences neat, spike-like, each with up to 6 whorls of flowering branches. on strong, erect,
main branches; terminal apex of the stem continuing growth.
Non-flowering lateral branches on the main flowering stems to 4–5cm long, arranged in whorls of 5.
Seed produced.

Origins: accession number 548/06; from the collection of the late Dr Violet Gray
who was an original member of The Heather Society’s Cape Heaths Group;
she is also commemorated in *Calluna vulgaris* ‘Mrs Ronald Gray’.

Cultivar registration number: E.2012:09
